

SymphonyAI Summit IT Service Management

Business Challenge

Addressing the increasing complexity of the modern IT environments is an enormous challenge. The need to balance competing priorities, demands for responsive and efficient services, and meeting secure, compliant, and cost-effective requirements are significant efforts for IT teams of all sizes. Additionally, enterprise service management (ESM) requires collaboration and integration across different departments and business units.

SymphonyAI Summit IT Service Management

SymphonyAI Summit IT Service Management is an enterprise grade application built on an extremely scalable architecture. The built-in Design Studio and widgets gives IT teams powerful tools to rapidly design and customize the application to meet rapidly changing enterprise needs and requirements. SymphonyAI Summit IT Service Management adheres to global security standards and compliance for privacy and customer data security.

Benefits

Single Service Portal

Consolidate all the service needs of employees in one place, and improve the overall service experience.

Improved productivity

Streamline and automate the process, provide faster resolution, make the experience simple and more intuitive and powered by AI.

Self-service

Reduce call deflection and improve experience by empowering employees with self-service experience enhanced by AI and automation.

Launch services at lightening speed

With Summit, you can role out new services with preconfigured workflows and a few drag and drops in minutes.

ITSM application architecture

Unlock new possibilities with SymphonyAI Summit IT Service Management

Ease of use and flexibility
